Nidhi Shah

+1 (704) 569 4008 |nidhishah232003@gmail.com | Charlotte, NC |Linkedin/nidhi | Github| Software Developer| Gen-AI/ML

EDUCATION

Master of Computer Science |UNC Charlotte **Aug 2024– May 2026**
Coursework: Artificial Intelligence, Applied AI, Data Mining, Software System Design and Implementation, Algorithm and Data Structures
Bachelor of Engineering in Computer Science | Parul University **June 2020 – May 2024**
Coursework: Database Management Systems, Computer Networks, Machine Learning

TECHNICAL SKILLS

Programming Languages: Python, C++, JavaScript, HTML/CSS, SQL
Frameworks & Libraries: React.js, Node.js, Express.js, Angular.js, TensorFlow, Scikit-learn, Pandas, NumPy, Matplotlib, Seaborn
Databases & Storage: MongoDB, PostgreSQL, MySQL, S3,DynamoDB
DevOps & Cloud: Docker, CI/CD, AWS (EC2, RDS, S3), Redis, FastAPI
Visualization & Tools: Power BI, Tableau, Git, VS Code, Bitbucket

WORK EXPERIENCE

Full-Stack Developer | ShaadiPros *(Internship)* United States| **Sep 2025-Present**

- Developing server-side rendered (SSR) features using Next.js and securing the backend with Node.js and MongoDB ,which optimized initial load times and improve SEO, resulting in a 25% increase in daily active user engagement.
- Building an end to end ML inference pipeline with TensorFlow and FastAPI, to deliver real-time personalized recommendations, improving accuracy by 20% and reducing false positives by 15% by leveraging scikit-learn models
- Architected high-throughput RESTful APIs with FastAPI (leveraging Pydantic for strict data validation) and secured via JWT access tokens, eliminating data exchange errors by 30% and ensuring robust authentication under high concurrency.
- Implemented Dockerized deployment across AWS EC2/ECS via an automated CI/CD pipeline (e.g., Jenkins/GitHub Actions) and configured RDS for data persistence, cutting production page latency by 40% and achieving 99.9% uptime

Technical Support Engineer | Office of OneIT UNC Charlotte, United States| **May 2025- Present**

- Resolving 500+ tickets across MacOS/Windows for 300+ students/faculty, troubleshooting software issues and documenting solutions.
- Automated resolution workflow steps via root-cause analysis, reducing repeat issues by 20% and improving response efficiency.

Software Development Engineer | Rishabh Software (*Internship)* Vadodara, India | **May 2023 – May 2024**

- Optimized React.js components and state management, cutting page load time by 30% and improving core web vitals.
- Redesigned SQL schemas and queries, reducing latency by 40% and improving system throughput under load.
- Built Tableau dashboards and automated workflows, accelerating decision speed by 25% and saving 10+ hrs/week.
- Shipped scalable features with product and QA teams, using Git workflows to cut merge conflicts by 20%.

PROJECTS

Photo Share App | *React.js, Node.js, MongoDB, Express.js*

- Engineered secure user authentication and role-based authorization with Node.js & MongoDB, enhancing data security and compliance.
- Architected and enhanced a NoSQL database for efficient image storage, lowering query latency by 50%.
- Built a responsive React.js frontend, boosting user engagement by 35% and retention by 20%.
- Engineered efficient RESTful APIs using Express.js and implemented a multi-level caching strategy (in-memory/Redis) with cursor-based pagination to seamlessly scale support for 10x more concurrent users.
- Led performance tuning and usability testing, improving platform reliability and user satisfaction by 30%.

Query AI– AI-Powered Query System | Angular.js, Python, FastAPI, PostgreSQL, MongoDB, OpenAI GPT

- Developed a NLP engine converting queries to SQL/NoSQL, cutting manual effort by 90% and supporting complex joins/aggregations.
- Designed and implemented a resilient hybrid database architecture using PostgreSQL for transactional integrity and MongoDB for unstructured metadata, achieving 40% better query performance by optimizing read/write patterns across dataset types.
- Developed a high-availability, asynchronous FastAPI backend with a Redis caching layer (for hot data reads) and robust JWT-based access control, which significantly improved system reliability under peak concurrency
- Engineered an Angular.js dashboard for real-time query input, live results, and analytics, raising end-user productivity by 35%.
- Optimized system performance cloud-readiness for AWS RDS and MongoDB Atlas, ensuring secure, scalable full-stack operations.

Loan Prediction System | *Python, Scikit-learn, Machine Learning*

- Analyzed applicant data, including demographics and financial details, to identify patterns influencing loan approval.
- Achieved 85% accuracy using Decision Trees, improving model performance and interpretability.
- Performed feature engineering, data cleaning, and feature selection for optimal prediction accuracy.
- Designed interactive visualizations in Matplotlib to analyze feature importance and model behavior.

CERTIFICATIONS

- Microsoft Certified: Power Platform Fundamentals [Credentials] **June 2023**
- Microsoft Certified: Azure AI Fundamentals [Credentials] **June 2023**
